

ENERGY, TECHNOLOGY AND ASSEMBLY DIVISION

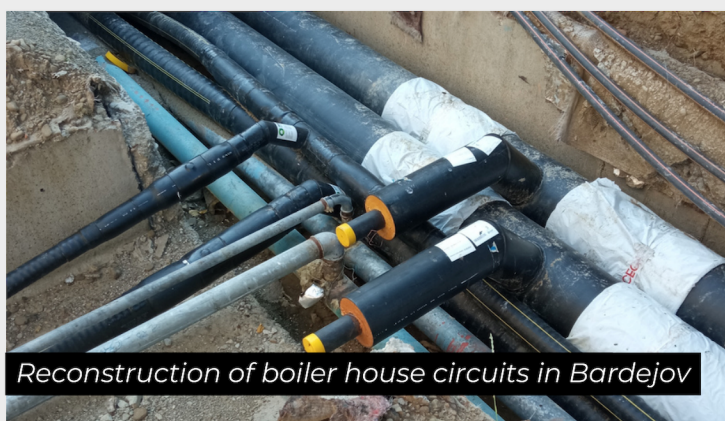

We offer our customers engineering and supply services in the field of energy, technology and assembly for industrial enterprises and the municipal sphere.

We provide services from complex construction on a "green meadow" to special reconstructions of individual parts of building units. Our division's strength lies in its professionalism and use of modern technologies.

During construction, we place emphasis on efficiency and quality of work, which also contributes to the use of materials from renowned manufacturers. All activities are ensured and carried out under the supervision of qualified construction managers and construction supervisors. Realization of constructions, or renovations of buildings meet the requirements of health and safety, fire protection and are checked by the safety coordinator according to valid decrees.

Construction of a new heat source in Trnava

Reconstruction of boiler house circuits in Bardejov

Reconstruction and modernization of the House of Culture in Sala

OUR EMPLOYEES HAVE EXPERT CAPABILITIES IN PRODUCTION AND SUPPLY OF TECHNOLOGY UNITS IN THE FOLLOWING SCOPE:

- Project documentation, including approval by a notified body
- Demolition works – structural modifications, activities and supplies, including construction supervision
- Supply of steel structures, technology equipment and pipe distribution systems, including surface finishing
- Installation of steel structures, equipment and pipes, supply and installation of insulation systems
- Supply and installation of electrical and measuring and regulating components, including design work
- Individual and comprehensive testing, pressure tests pursuant to STN standards and applicable legislation, including their acceptance by a notified body
- Accompanying technical documentation pursuant to decrees and as per the customer's requirements
- Technical support and control of construction activities, technology assemblies

BASED ON SPECIFIC REQUIREMENTS OF OUR CUSTOMERS, WE CAN PROVIDE:

- Full portfolio of construction work
- Construction of residential houses
- Reconstructions of structures
- Exterior and interior modifications
- Performance of technical services for buildings
- Shutdown engineering works, particularly in chemical industry plants. These include mainly replacement and installation of seals, equipment cleaning, repairs of equipment parts, including any necessary welding work, pressure testing.

The new construction of the emergency department in the Komarno Hospital

RECENT MAJOR PROJECTS

Kosit	Production and replacement of the tube sheet on the heat exchanger
BorsodChem Zrt.	Shutdown works
Duslo, a. s.	Reconstruction of bridges
Duslo, a. s.	Installation of Argon unit - off site
Veolia Energia Levice	Modernization of heat distribution
Sládkovičovo	Building extension of elementary school
Duslo, a. s.	Reconstruction of the entrance building
Nemocnica AGEL Komárno s.r.o.	The new construction of the emergency department at the Komarno Hospital
MeT Šaľa spol. s r. o.	Modernization of heat distribution
Duslo, a. s.	Restoration and rationalization of steam distribution
Šaľa	Reconstruction and modernization of the House of Culture
Istrochem	Reconstruction of the carbon disulfide bottling point
ČEZ Energetické služby, s. r. o.	Deliveries, dismantling and assembly - PORFIX - new gas boiler room and autoclaves
Vlčany	Construction of a multifunctional house
BARDTERM Bardejov	Reconstruction of boiler circuits
KOSIT Košice	Realization of a new energy source for the production of electricity
MHTH Trnava	Construction of a new heat source
Prievidzké tepelné hospodárstvo	Thermal power supply Baňa Cígel'

Reconstruction of the entrance building

Realization of a new energy source for the production of electricity

MENERT spol. s r. o.

MENERT Ltd. has been successfully operating on domestic and foreign markets since 1991. Currently we provide a wide range of products and services to our clients.

WE SPECIALIZE IN:

- automation, measurement and control of industrial processes
- turnkey implementation of technological units
- engineering and locksmith production
- engineering tasks in construction and implementation of constructions
- construction and reconstruction of central heat sources
- metrology activities in an accredited laboratory

MENERT – THERM, s. r. o.

The main activity of the subsidiary MENERT-THERM Ltd. is the production and distribution of heat. MENERT-THERM is among the first companies in Slovakia to produce heat using renewable energy sources (straw, wood chips and corn-straw).

MENERT – BIOTECH s. r. o.

Subsidiary of Menert Biotech Ltd. provides services in the production, transportation and handling of solid fuels based on biomass for energy purposes. It provides comprehensive solutions to new trends in biotechnology.

AQWATT s. r. o.

A subsidiary of AQWATT Ltd. owns a photovoltaic power plant, deals with business, consulting and market research.
